

TECHNOLOGY EXPLORATIONS 10

Description

Technology Explorations 10 is designed to provide flexibility for teachers and students while ensuring that the rigorous provincial curriculum standards are met. Based on students' interests and strengths and on course offerings, teachers may use Curricular Competencies from Technology Explorations 10 with a combination of Content provided from technology education in other areas. It is expected that at least six topics from the Content column will be selected from at least two curricular areas to best meet the needs of the students. Note that the origin of each Content learning standard in Technology Explorations 10 is provided in parentheses.

Examples of Content learning standards:

- drafting styles, including perspective, mechanical drafting, and architectural drawing (Drafting 10)
- techniques for stock breakout and woodworking using a variety of tools and equipment, including stationary power equipment (Woodwork 10)
- construction sequences involved in making a working circuit (Electronics and Robotics 10)

BIG IDEAS

User needs and interests drive the design process.

Social, ethical, and sustainability considerations impact design.

Technologies help us accomplish many specific tasks in our lives.

Learning Standards

Curricular Competencies	Content
<p><i>Students are expected to be able to do the following:</i></p> <p>Applied Design</p> <p><i>Understanding context</i></p> <ul style="list-style-type: none"> Engage in a period of research and empathetic observation <p><i>Defining</i></p> <ul style="list-style-type: none"> Identify potential users and relevant contextual factors Identify criteria for success, intended impact, and any constraints for a chosen design opportunity Determine whether activity is collaborative or self-directed <p><i>Ideating</i></p> <ul style="list-style-type: none"> Take creative risks in generating ideas and add to others' ideas in ways that enhance them Identify and use sources of inspiration Screen ideas against criteria and constraints Critically analyze and prioritize competing factors to meet community needs for preferred futures Maintain an open mind about potentially viable ideas <p><i>Prototyping</i></p> <ul style="list-style-type: none"> Choose a form for prototyping and develop a plan that includes key stages and resources 	<p><i>Students are expected to know <u>at least six</u> of the following <u>from at least two</u> curricular areas:</i></p> <ul style="list-style-type: none"> project design opportunities (Woodwork 10) ethics of cultural appropriation in design process (Woodwork 10, Metalwork 10) techniques for stock breakout and woodworking using a variety of tools and equipment, including stationary power equipment (Woodwork 10) functions, uses, and role of portable and stationary power equipment in the creation of a project (Woodwork 10) function and use of hand tools (Woodwork 10) proper storage and organization of tools and equipment (Metalwork 10) selection of metal for size, shape, and finish (Metalwork 10) start-up, shutdown, and handling procedures for compressed gas cylinders (Metalwork 10) mechanical fasteners and fastening methods (Metalwork 10) methods for laying out, forming, and joining metal (Metalwork 10) computer numerical control (CNC) applications (Metalwork 10)
