

Indigenous Knowledge and Perspectives: Mathematics K–12

Context

In B.C.'s redesigned curriculum, Indigenous knowledge and perspectives are integrated throughout all areas of learning and are evident in the curriculum's rationale statements, goals, big ideas, mandated learning standards, and elaborations. The First Peoples Principles of Learning offer a crucial lens for curriculum, placing a significant importance on the authentic integration of Indigenous knowledge and perspectives in relevant and meaningful ways.

The intent behind this integration is to promote a growing understanding of Indigenous peoples in B.C. that will contribute to the development of educated citizens who reflect on and support reconciliation. This approach to Indigenous education encourages enlightened discussion among teachers and students in all areas of learning and grade levels, and this approach values and prioritizes Indigenous knowledge and perspectives that can only be found in B.C.

Purpose

The *Indigenous Knowledge and Perspectives: K-12 Mathematics Curriculum* resource is intended to support teachers in authentically integrating Indigenous knowledge and perspectives into their classrooms. This resource provides a detailed overview of the explicit and implicit references to Indigenous knowledge and perspectives in the Big Ideas, Curricular Competencies, and Content throughout the K-12 Mathematics curriculum.

Explicit References

Explicit references include the Big Ideas, Curricular Competencies, and Content that directly refer to Indigenous knowledge and perspectives. For example, the Grade 8 Mathematics curriculum includes the following explicit reference:

Grade 8, Curricular Competency, **Incorporate First Peoples worldviews and perspectives to make connections to mathematical concepts**

⇒ *Incorporate First Peoples:*

- *Invite local First Peoples Elders and knowledge keepers to share their knowledge*

⇒ *make connections:*

- *Bishop's cultural practices: counting, measuring, locating, designing, playing, explaining (csus.edu/indiv/o/oreyd/ACP.htm_files/abishop.htm)*
- *aboriginaleducation.ca*
- *Teaching Mathematics in a First Nations Context, FNEESC fnesc.ca/k-7/*

Implicit References

Implicit references are Big Ideas, Curricular Competencies, and Content that indirectly refer to Indigenous knowledge and perspectives. For example, the Geometry 12 curriculum includes the following implicit reference:

Geometry 12, Big Idea, **Geometry stories and applications vary across cultures and time.**

⇒ *Can we find geometric relationships in local First Peoples art or culture?*

⇒ *What do we notice about and how would we construct common shapes found in local First Peoples art?*

The implicit references included in this resource represent just one perspective and should not be considered the only interpretation. Identifying implicit references depends on personal and cultural background, prior knowledge and experience, subject-matter expertise, points of view, and connections to place*. As such, the implicit references in this resource serve only as a guide and should not be viewed as a conclusive list.

Note on Elaborations: Explicit references to Indigenous knowledge and perspectives that are found within the Elaborations of Big Ideas, Curricular Competencies, or Content are considered *implicit* unless they are accompanied by an explicit reference in the Big Ideas, Curricular Competencies, or Content.

The key below shows how the information in the chart is structured:

Bolded print	Mandated Learning Standard
•	Sub-points of a Learning Standard
⇒	Elaborations
○	Key questions or samples

***Place** refers to any environment, locality, or context with which people interact to learn, create memory, reflect on history, connect with culture, and establish identity.

Indigenous Knowledge and Perspectives: Mathematics K–12

MATHEMATICS

Kindergarten

	Explicit	Implicit
Big Ideas		<p>Numbers represent quantities that can be decomposed into smaller parts.</p> <ul style="list-style-type: none"> ⇒ <i>What stories live in numbers?</i> ⇒ <i>How do numbers help us communicate and think about place?</i> <p>Familiar events can be described as likely or unlikely and compared.</p> <ul style="list-style-type: none"> ⇒ <i>How does data/information help us predict the likelihood of an event? (e.g. weather)</i> ⇒ <i>What stories can data tell us?</i>
Curricular Competencies	<p>Engage in problem-solving experiences that are connected to place, story, cultural practices, and perspectives relevant to local First Peoples communities, the local community, and other cultures</p> <ul style="list-style-type: none"> ⇒ <i>in daily activities, local and traditional practices, the environment, popular media and news events, cross-curricular integration</i> ⇒ <i>Patterns are important in First Peoples technology, architecture, and artwork.</i> ⇒ <i>Have students pose and solve problems or ask questions connected to place, stories, and cultural practices.</i> <p>Incorporate First Peoples worldviews and perspectives to make connections to mathematical concepts</p> <ul style="list-style-type: none"> ⇒ <i>Incorporate: Invite local First Peoples Elders and knowledge keepers to share their knowledge</i> ⇒ <i>make connections:</i> <ul style="list-style-type: none"> – <i>Bishop’s cultural practices: counting, measuring, locating, designing, playing, explaining (csus.edu/indiv/oloreyd/ACP.htm_files/abishop.htm)</i> – <i>aboriginaleducation.ca</i> – <i>Teaching Mathematics in a First Nations Context, FNEESC fnesc.ca/k-7/</i> 	<p>Estimate reasonably</p> <ul style="list-style-type: none"> ⇒ <i>First Peoples used specific estimating and measuring techniques in daily life (e.g., seaweed drying and baling)</i> <p>Connect mathematical concepts to each other and to other areas and personal interests</p> <ul style="list-style-type: none"> ⇒ <i>to develop a sense of how mathematics helps us understand ourselves and the world around us (e.g., daily activities, local and traditional practices, the environment, popular media and news events, social justice, and cross-curricular integration)</i>
