

## BIG IDEAS

**DNA** is the basis for the diversity of living things.

Energy change is required as atoms rearrange in **chemical processes**.

**Energy** is conserved, and its transformation can affect living things and the environment.

The formation of the **universe** can be explained by the big bang theory.

## Learning Standards

Curricular Competencies	Content
<p><i>Students are expected to be able to do the following:</i></p> <p><b>Questioning and predicting</b></p> <ul style="list-style-type: none"> <li>• Demonstrate a sustained intellectual curiosity about a scientific topic or problem of personal interest</li> <li>• Make observations aimed at identifying their own questions, including increasingly complex ones, about the natural world</li> <li>• Formulate multiple hypotheses and predict multiple outcomes</li> </ul> <p><b>Planning and conducting</b></p> <ul style="list-style-type: none"> <li>• Collaboratively and individually plan, select, and use appropriate investigation methods, including field work and lab experiments, to collect reliable data (qualitative and quantitative)</li> <li>• Assess risks and address ethical, cultural, and/or environmental issues associated with their proposed methods and those of others</li> <li>• Select and use appropriate equipment, including digital technologies, to systematically and accurately collect and record data</li> <li>• Ensure that safety and ethical guidelines are followed in their investigations</li> </ul> <p><b>Processing and analyzing data and information</b></p> <ul style="list-style-type: none"> <li>• Experience and interpret the local environment</li> <li>• Apply <b>First Peoples perspectives and knowledge</b>, other <b>ways of knowing</b>, and local knowledge as sources of information</li> <li>• Seek and analyze patterns, trends, and connections in data, including describing relationships between variables (dependent and independent) and identifying inconsistencies</li> </ul>	<p><i>Students are expected to know the following:</i></p> <ul style="list-style-type: none"> <li>• <b>DNA structure and function</b></li> <li>• <b>patterns of inheritance</b></li> <li>• mechanisms for the diversity of life:             <ul style="list-style-type: none"> <li>– <b>mutation</b> and its impact on evolution</li> <li>– <b>natural selection</b> and <b>artificial selection</b></li> </ul> </li> <li>• <b>applied genetics</b> and <b>ethical considerations</b></li> <li>• rearrangement of atoms in <b>chemical reactions</b></li> <li>• acid-base chemistry</li> <li>• law of conservation of mass</li> <li>• <b>energy change</b> during chemical reactions</li> <li>• <b>practical applications and implications of chemical processes</b>, including First Peoples knowledge</li> <li>• <b>nuclear energy</b> and <b>radiation</b></li> <li>• law of conservation of energy</li> <li>• <b>potential</b> and <b>kinetic</b> energy</li> <li>• <b>transformation of energy</b></li> <li>• local and global <b>impacts of energy transformations</b> from technologies</li> <li>• formation of the universe:             <ul style="list-style-type: none"> <li>– big bang theory</li> <li>– <b>components of the universe over time</b></li> </ul> </li> <li>• <b>astronomical data and collection methods</b></li> </ul>

Learning Standards (continued)

Curricular Competencies	Content
<ul style="list-style-type: none"> <li>• Construct, analyze, and interpret graphs (including interpolation and extrapolation), models, and/or diagrams</li> <li>• Use knowledge of scientific concepts to draw conclusions that are consistent with evidence</li> <li>• Analyze cause-and-effect relationships</li> </ul> <p><b>Evaluating</b></p> <ul style="list-style-type: none"> <li>• Evaluate their methods and experimental conditions, including identifying sources of error or uncertainty, confounding variables, and possible alternative explanations and conclusions</li> <li>• Describe specific ways to improve their investigation methods and the quality of the data</li> <li>• Evaluate the validity and limitations of a model or analogy in relation to the phenomenon modelled</li> <li>• Demonstrate an awareness of assumptions, question information given, and identify bias in their own work and secondary sources</li> <li>• Consider the changes in knowledge over time as tools and technologies have developed</li> <li>• Connect scientific explorations to careers in science</li> <li>• Exercise a healthy, informed skepticism and use scientific knowledge and findings to form their own investigations and to evaluate claims in secondary sources</li> <li>• Consider social, ethical, and environmental implications of the findings from their own and others' investigations</li> <li>• Critically analyze the validity of information in secondary sources and evaluate the approaches used to solve problems</li> </ul> <p><b>Applying and innovating</b></p> <ul style="list-style-type: none"> <li>• Contribute to care for self, others, community, and world through individual or collaborative approaches</li> <li>• Transfer and apply learning to new situations</li> </ul>	

Learning Standards (continued)

Curricular Competencies	Content
<ul style="list-style-type: none"> <li>• Generate and introduce new or refined ideas when problem solving</li> <li>• Contribute to finding solutions to problems at a local and/or global level through inquiry</li> <li>• Consider the role of scientists in innovation</li> </ul> <p><b>Communicating</b></p> <ul style="list-style-type: none"> <li>• Formulate physical or mental theoretical models to describe a phenomenon</li> <li>• Communicate scientific ideas, claims, information, and perhaps a suggested course of action, for a specific purpose and audience, constructing evidence-based arguments and using appropriate scientific language, conventions, and representations</li> <li>• Express and reflect on a variety of experiences, perspectives, and worldviews through <b>place</b></li> </ul>
