

BIG IDEAS

Products can be
designed for life cycle.

Personal design interests require
the evaluation and refinement of skills.

Tools and technologies can be adapted
for specific purposes.

Learning Standards

Curricular Competencies	Content
<p><i>Students are expected to be able to do the following:</i></p> <p>Applied Design</p> <p><i>Understanding context</i></p> <ul style="list-style-type: none"> Conduct user-centred research to understand design opportunities and barriers <p>Defining</p> <ul style="list-style-type: none"> Choose a design opportunity and point of view Identify potential users, intended impact, and possible unintended negative consequences Make inferences about premises and boundaries that define the design space <p>Ideating</p> <ul style="list-style-type: none"> Take creative risks to identify gaps to explore as design space Generate ideas to create a range of possibilities and add to others' ideas in ways that create additional possibilities Critically analyze how competing social, ethical, and sustainability considerations impact designed solutions to meet global needs for preferred futures Prioritize ideas for prototyping and designing with users <p>Prototyping</p> <ul style="list-style-type: none"> Identify and use a variety of sources of inspiration and information Choose an appropriate form, scale, and level of detail for prototyping, and plan procedures for prototyping multiple ideas Analyze the design for life cycle Construct prototypes, making changes to tools, materials, and procedures as needed Record iterations of prototyping 	<p><i>Students are expected to know the following:</i></p> <ul style="list-style-type: none"> factors involved in interpersonal relationships, including types, roles, functions, and importance interpersonal relationship communication styles and strategies, including various methods of communication committed relationships, including indicators of readiness for a committed relationship, legal status and requirements, financial implications, role of community and culture marriage and commitment customs and how they are influenced by culture, including First Peoples cultures factors involved in ending relationships, including the emotional, legal, financial, and social implications for the individuals involved components of safe/healthy relationships and unsafe/unhealthy relationships, and how to stay safe in a variety of interpersonal relationships indicators of unhealthy/unsafe relationships, and actions that can be taken if relationships become unhealthy/unsafe

Learning Standards (continued)

Curricular Competencies	Content
<p><i>Testing</i></p> <ul style="list-style-type: none"> • Identify feedback most needed and possible sources of that feedback • Develop an appropriate test of the prototype • Gather feedback from users over time to critically evaluate their design and make changes to product design or processes • Iterate the prototype or abandon the design idea <p><i>Making</i></p> <ul style="list-style-type: none"> • Identify appropriate tools, technologies, materials, processes, potential funding sources, and time needed for production, and where/how these could be available • Use project management processes when working individually or collaboratively to coordinate production <p><i>Sharing</i></p> <ul style="list-style-type: none"> • Share their progress while making to increase feedback, collaboration, and, if applicable, marketing • Decide on how and with whom to share or promote their product, creativity, and, if applicable, intellectual property • Critically evaluate their design thinking and processes, and their ability to work effectively both as individuals and collaboratively in a group, including the ability to implement project management processes • Identify new design issues, including how they or others might build on their concept <p>Applied Skills</p> <ul style="list-style-type: none"> • Demonstrate an awareness of safety issues for themselves, co-workers, and users in both physical and digital environments • Identify and evaluate their skills and skill levels, in relation to their project or design interests, and develop specific plans to learn or refine their skills over time <p>Applied Technologies</p> <ul style="list-style-type: none"> • Explore existing, new, and emerging tools, technologies, and systems and evaluate their suitability for their design interests • Analyze the role and impact of technologies in societal change, and the personal, social, and environmental impacts, including unintended negative consequences, of their choices of technology use • Analyze how cultural beliefs, values, and ethical positions affect the development and use of technologies 	

**APPLIED DESIGN, SKILLS, AND TECHNOLOGIES – Interpersonal and Family Relationships
Grade 11**

Big Ideas – Elaborations

- **designed for life cycle:** taking into account in the design process, economic costs, and social and environmental impacts of the product, from the extraction of raw materials to eventual reuse or recycling of component materials

**APPLIED DESIGN, SKILLS, AND TECHNOLOGIES – Interpersonal and Family Relationships
Grade 11**

Curricular Competencies – Elaborations

- **user-centred research:** research done directly with potential users to understand how they do things and why, their physical and emotional needs, how they think about the world, and what is meaningful to them
- **Defining:** setting parameters
- **boundaries:** limiting factors, such as available technology, expense, environmental impact, issues of appropriation, and knowledge that is considered sacred
- **Ideating:** forming ideas or concepts
- **designing with users:** working with users at all stages of the design process
- **sources of inspiration:** may include experiences; traditional cultural knowledge and approaches, including those of First Peoples; places, including the land and its natural resources and analogous settings; and people, including users, experts, and thought leaders
- **information:** for example, other people as experts (e.g., First Peoples Elders), secondary sources, collective pools of knowledge in communities, collaborative atmospheres
- **design for life cycle:** including the social and environmental impacts of extraction and transportation of raw materials, manufacturing, packaging, transportation to markets, servicing or providing replacement parts, expected usable lifetime, and reuse or recycling of component materials
- **iterations:** repetitions of a process with the aim of approaching a desired result
- **sources of that feedback:** may include peers; users; keepers of traditional cultural knowledge and approaches, including those of First Peoples; and other experts
- **appropriate test:** includes evaluating the degree of authenticity required for the setting of the test, deciding on an appropriate type and number of trials, and collecting and compiling data
- **potential funding sources:** It is not the intent, and not appropriate, for students to have to raise funds in order to complete their school project. Students may, however, wish to investigate sources of funding for the commercial development of their products.
- **share:** may include showing to others, use by others, giving away, or marketing and selling
- **product:** for example, a physical product, a process, a system, a service, or a designed environment
- **technologies:** things that extend human capabilities

Content – Elaborations

- **interpersonal relationships:** including social, family, romantic, workplace, and community
- **types:** friends, colleagues; intimate, personal, romantic, sexual, familial
- **various methods of communication:** for example, verbal, non-verbal (body language), electronic communication; strategies employed by effective communicators
- **role of community and culture:** dating customs, arranged marriages, influences of religious beliefs, government regulations, laws
- **marriage and commitment customs:** for example, wedding ceremonies, vow renewal, commitment ceremonies
- **culture:** for example, language, symbols, art, literature, values, beliefs, traditions, ethnic origin, religion, social hierarchy, kinship relationships, current trends
- **components:** for example, trust, mutual support, clear limits and boundaries, humour, honesty; mistrust, jealousy, isolation, control, tension

DRAFT
