

# NO the trouble

Helen  
mar. 4/14  
Block: C

Find the Area for:

$$A = l \cdot w$$

$$= 4 \cdot 5$$

$$= 20$$

① look for shapes in shaded part where area can be found

thinking of the graph as a  $\frac{1}{4}$  circle does not work

x	y
0	4
1	5
2	6
3	7
4	8
5	9

does not work  
used wrong  
line equation

$$x = 5$$

$$y = 29 \quad (5^2 + 4)$$

$$29 - 5 = 24$$

$$a^2 + b^2 = c^2$$

$$24^2 + 5^2 = c^2$$

$$c = 24.51530134$$

\* pythagorean  
doesn't work  $\rightarrow$  hyp  
not a straight line

x	y
0	4
1	5
2	8
3	13
4	20
5	29

make little rectangles  
to find total area

★  $\sum_{i=1}^n A_i$  } sum from  $i=1$  to  $i=n$

(ex)

next pg.

Use mass

mass of paper: 4.60g

mass of graph: 0.26g

$$\text{area of paper: } 93.5 \left( \frac{0.26}{4.60} \right) = 5.284 \text{ in}^2$$

$$\frac{x}{1.45} = \frac{0.265}{0.74} \quad x = 51.926$$

Thought Process

- ① First tried to find rectangles/shapes in shaded area that area could be found for
- ② Tried to think of the graph as a  $\frac{1}{4}$  circle then figure out the area for that  $\rightarrow$  didn't work
- ③ Pythagorean doesn't work on the triangle  $\rightarrow$  curve
- ④ Graph the  $y = x^2 + 4$  quadratic, try to form rectangles and squares and find individual areas and add together  $\rightarrow$  couldn't find area of curved triangles.
- ⑤ found mass of paper and mass of individual graph and solved for  $x$

~~ex)  $\frac{5}{2} \cdot 2 = 1 + 2 + 3 + 4 + 5$~~
